

Data Transit System

OVERCOME DATA CHALLENGES

& improve time to market of new applications and services

BRIDGING THE GAP

With DTS, enterprise data can now be consumed in new, innovative ways, helping companies meet their informational needs and increase productivity.

DTS BENEFITS

- Ensures a centralized management of the data sources
- Eliminates repetitive programming and integration tasks
- Enhances developer agility
- Data source access control meets GDPR compliance requirements
- Automatically ensures redundancy and scalability
- Easy to use and highly resilient

Usability & Interoperability

Cost Efficiency

High Performance

High-end Security

WHY DTS ?

DTS helps your company access data from multiple sources (including legacy and hard to reach databases), integrate it into your applications and workflows, and control access. DTS is also able to customize the data streams provided based on information from a client or front-end application.
